Possible Anoxic/Hypoxic

Post Stroke

MS

Seizure Disorder

Chronic Pain Evaluation

Possible Addiction

Possible Exaggeration/Malingering

Chronic Pain

ADHD

General psychotherapy

Addiction treatment

Psycho-oncology

Other _____

OTHER OR BRIEF REASON FOR CONSULT:

Instructions: FAX sheet to number above with neurological evaluation if available. Have patient sign release to your office from us and include "confidential psychological neuropsychological report and progress notes" as the information to be released. Ideally, fax that with the consult request and it will make it easy for us to let you know if the patient did not show, did not have the right insurance, or was referred elsewhere due to wait times, etc. Check all the above that apply.

We generally do not see children younger than 5 for assessment. We are not on any managed care panels

Generally for Medicare and BCBS patients they will need to schedule a one hour intake and a separate one hour mental status before the testing sessions, written consults will take 2-3 weeks for final report. Let us know if you need a quick summary before that. BCBS does not cover Learning Disability Assessment

Due to changes in the PIP law Auto accident or litigation cases must be referred for neuropsychological IME by their attorney.
